[Visit Homepage](#)

The Linux kernel 4.9 and modules for use on PCs with one or more processors supporting PAE.

This kernel requires PAE (Physical Address Extension). This feature is supported by the Intel Pentium Pro/II/III/4/4M/D, Xeon, Core and Atom; AMD Geode NX, Athlon (K7), Duron, Opteron, Sempron, Turion or Phenom; Transmeta Efficeon; VIA C7; and some other processors.

This kernel also runs on a Xen hypervisor. It supports both privileged (dom0) and unprivileged (domU) operation.

The modules are signed.
